APPLICATIONS

- High consistent stock removal
- Top Sized for cool cutting
- Long service life
- Very good price-performance ratio

VSM SK850X TOP SIZE VSM® CERAMICS

The VSM SK850X TOP SIZE is an universal product due to its robust polyester backing and coating technique. It is perfectly suited for use with hand held tools and stationary machines, for removal of weld seams, deburring of castings, stroke sanding and many other applications. Additionally it can be used for grinding of flat surfaces, edges and slightly profiled parts. Particularly when grinding steel the VSM SK850X TOP SIZE shows its advantages: out-standing stock removal, cool cutting without discoloring of the workpiece and long service life.

High consistent stock removal

- aggressive cutting action and the abrasive additives
- continuous generation of new grain cutting edges over its entire life

No discoloring of the workpiece

- due to top size layer, optimum grain orientation and coating technique

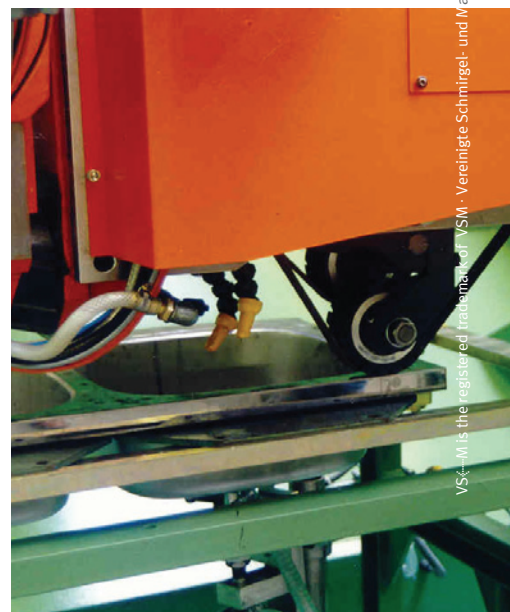

Long service life

- self-sharpening ceramic-zirconia alumina grain
- excellent adhesion of the specially-treated grain to the robust backing

Very good price-performance ratio

- well-balanced mixture of the specially-treated grain
- the abrasive grains high stock removal rate

Technical data	
Grain type:	VSM® CERAMICS and zirconia alumina blend
Grit size:	36, 40, 50, 60, 80
Backing material:	Polyester cloth
Bonding:	Full resin-bonded
Manufact. width:	58 inches
Recommended applications	
Material:	Chrome- and chrome-nickel steel, high-alloyed steel, cast iron, non-ferrous metals
Grinding process:	Grinding of flat surfaces, edges and slightly profiled parts; deburring
Workpiece:	Containers, surgical instruments, castings, forgings, hand tools, implants, metal fabrications, metal furniture parts
Operation:	Automatic grinding, robotic grinding, backstand grinding, hand held tools, stroke sanding
